

PREDICT AND PREVENT AS A CONNECTED POLICE FORCE

WHAT DOES CONNECTED POLICING LOOK LIKE?

When critical decisions are all in a day's work, on-the-spot access to the right people and information is vital.

Motorola Solutions is uniquely positioned to provide an end-to-end intelligence and communications platform, so you can make the right decisions at the scene or in command.

CONNECTED OFFICER

Alerts between holster sensors and body-worn camera and connect to the operations centre via the officer's Motorola P25 radio.

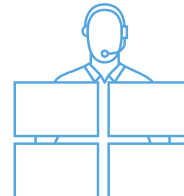

CONNECTED VEHICLE

Vehicle sensors cross-reference with other sensors in and around the vehicle, create alerts and trigger workflows at the command centre via multiple bearers.

CONNECTED OPERATIONS CENTRE

Uses mission-critical radio network to communicate information to officers in the field and monitor events

SENSORS

- Holster sensor detects the moment a firearm or conducted energy weapon (CEW) is removed
- Compatible with most holster types
- Integrated sensor and holster
- Real-time sensor data delivers event alerts to nearby officers
- Sensor can be inserted into many vest types to detect piercing

BODY-WORN CAMERA

- Hands-free activation – event recording is triggered when weapons drawn, radio duress is activated or other sensor events occur
- Operations centre can monitor real-time streaming
- Video recording starts on nearby peer devices simultaneously via a bluetooth low energy connection from a bluetooth beacon
- Pooled body-worn cameras with one-time pairing provide optimum use of resources and simplicity for officers

MOBILE APPLICATION

- Enhance Police officer experience by integrating with your existing systems and workflows
- Improve situational awareness and connect with critical information for an informed, coordinated and rapid response
- Streamline information and evidence capture by reducing manual or redundant tasks and enable digital report submission from the field
- Enabled for CarPlay: Integrates with in vehicle media unit

APX PORTABLE RADIO

- Supports multiple simultaneous connections to body-worn cameras, audio accessories and radio control devices to body-worn cameras, audio.
- Integrated orientation and motion sensors detect man down situations
- ViQi Voice Control (only with APX NEXT)

VEHICLE HUB

- Multiple bearer support – P25, LTE, satellite
- Video and MDT integration
- Backup radio communications
- Vehicle telemetry
- Wireless hotspot around the vehicle
- Manage key operational workflows from within police vehicles through CarPlay with added safe operation benefit through voice control

APX MOBILE RADIO

- SmartConnect, PTT over broadband
- Collision alerts through impact sensor

IN-CAR VIDEO

- Connects sensors and body-worn cameras
- Real-time video streaming
- Automatic number plate recognition
- Patented Record-After-the-Fact – capture video from events that already happened

ANALYTICS AND INTELLIGENCE

- Situational Awareness Software - Provides a complete operating picture that integrates critical real-time intelligence in a single display including video, alerts and location-based data
- Data & video analytics to support decision making
- Filters and automates data delivery through a rules-based decision support system
- Alerts a larger field user group through P25 radios and smart devices, based on agency-defined rules

COMPUTER-AIDED DISPATCH

- Streamlines the data flow from call-taking to dispatch and provides better information to dispatchers in a fast and efficient manner.

DIGITAL EVIDENCE MANAGEMENT

- Secure storage and management of multimedia content.

ENHANCING POLICING BY IMPROVING SITUATIONAL AWARENESS

Our goal is to provide police officers with the best data and connectivity, so they can keep their eyes up and hands free.

Integrated devices capture more data to help derive new intelligence while building an audit trail for reporting and evidentiary purposes. And, most importantly, help to protect officers on duty.

- ✓ Rely on robust, secure, user-friendly body-worn cameras used by police and emergency services workers globally. Video redaction and live streaming to the operations centre are standard.
- ✓ Alert every officer to relevant events through integration across devices, technologies and operations centre.
- ✓ Connect devices and sensors through Motorola P25 radios and commercial LTE devices.
- ✓ Implement a platform that's ready for enhanced data and video analytics and purpose-built AI solutions.
- ✓ Handle evidence securely – you can host on premises, in the cloud or a hybrid, or we can provide managed hosting for you.

EQUIPPING OFFICERS TO MAXIMISE THEIR SAFETY AND PRODUCTIVITY

For over 50 years in Australia, Motorola Solutions has been helping police forces across the country work more effectively and keep the community safer. We're experts in designing and integrating information management, communications and dispatch operations systems. We also have extensive international experience providing solutions for public safety and emergency services.

Motorola Solutions has more than 17,000 employees in 60 countries, serving over 100,000 customers in 100 countries. Our 450 staff across offices in Perth, Melbourne, Sydney, Adelaide, Canberra and Brisbane work closely with our police force partners in Victoria, Western Australia, South Australia, Northern Territory, Queensland and the Australian Federal Police.

OUR INVESTMENT IN PUBLIC SAFETY

We invested \$732 million into research and development in 2021, which demonstrates our commitment to designing the next generation of public safety and security. We work to simplify, integrate, analyse and present the relevant information to your connected police force, through the first and only mission-critical ecosystem designed specifically for public safety.

Founded on customer-centred research and development, and reinforced by 90 years of mission-critical expertise, our public safety ecosystem unifies radio and broadband communications, intelligently captures and analyses video and integrates software solutions, end-to-end. Our mission is to continuously innovate so officers and the community are safer every day, more disasters can be averted, and more cases solved.

FUTURE-PROOFING YOUR PURCHASE

Motorola Solutions is committed to providing scalable platforms designed to meet both current and future communication needs. You can be confident your procurement is future-proofed by an integration plan designed to seamlessly meld existing and upcoming data devices and systems. We engineer all our products to be highly customisable and easily scalable, to constantly meet your changing operational requirements.
