

CUSTOMER PROGRAMMING SOFTWARE FOR APX NEXT RADIOS

BASIC OFF-LINE RADIO CONFIGURATION

Managing your radio fleet is an important part of day-to-day operations. For efficient communications with first responders, you need the flexibility to have access to APX NEXT radio management in off-line situations. Whether during an emergency or when a broadband connection is unavailable, our Customer Programming Software (CPS) allows you to configure radios one-at-a-time on a local PC via a secure USB port connection with TLS-PSK based encryption.

Motorola Solutions' CPS is a proprietary Windows-based application, allowing for the radio firmware upgrade, codeplug change and addition of new features. The codeplug can be saved locally as a template to be reused when programming other radios.

APX NEXT DEPENDENCIES:

Radio firmware R04.20.00

CPS version R26.00.00 or later

APX NEXT
